

Enjoy the freedom of outdoor living safe from UV danger

'Solasafe' polycarbonate sheeting provides 99.9% protection from harmful UV rays that cause sunburn and skin damage. Outdoor family and children's play areas are part of the Australian lifestyle, and selecting the best roofing solution is the first step to ensure you get the maximum benefit from your investment. Polycarbonate is an advanced polymer with optical and physical properties that can't be matched by other materials. Adding an outdoor room to your home can enhance your family life and add value to your property. Solasafe has three levels of polycarbonate sheeting to choose from. A level to suit your needs and climate. A colour to suit your home and surroundings.

Level One 'SOLASAFE'

The most widely used Solasafe Polycarbonate sheet. Seven colours with varying light and heat transmission ratings.

When you want maximum light Solasafe Clear sheeting lets 90% of available light flood your space. Truly, 'your window to the sky'. Integral surface protection prevents UV degradation of the sheet surface and helps prolong its life. It also minimises

yellowing of the sheet over its lifetime; see the generous warranty that covers this. The impact strength of polycarbonate is up to 250 times that of tempered glass, strong enough to resist damage from even heavy hail. See the warranty for details.

Level One
Colours – CORRUGATED:
Clear, Opal, Grey,
Light Bronze, Green,
Dark Tint.
Colours – GRECA

Level Two 'SOLASAFE' Comfort Range.

In designer colours that transmit less heat but allow plenty of soft light to pass through. More comfort.

Without doubt polycarbonate is by far the most preferred transparent/translucent roofing product throughout the world. In some situations a degree of heat control may be required, and in this regard 'Solasafe' Level Two sheeting offers a good

solution. The designer colours – Smooth Cream and Mist Green reduce the amount of heat passing through the sheet, but still transmit ample light. The sheet is just as tough and long lasting as other Solasafe products, and protected by the same warranty.

Level Three 'SOLASAFE' HR1 Heat Reducing polycarbonate.

Metallic particles reflect heat but allow soft diffused light to pass through. Especially suitable in hot climates.

The advanced technology incorporated in 'Solasafe' Level Three sheeting disperses and reflects up to 80% of the sun's heat while allowing soft, diffused light, to pass through. This is achieved by millions of metallic particles scattered through the

sheet. The metallic particles also give the sheet an attractive silvery patina. Use Solasafe Level Three where the climate demands it. 99.9% UV protection is built-in to protect the sheet surface and the people below. Enjoy outdoor living in comfort.

Level Three
