

Spinaway

- Spinaway Turbo ventilators suit tiled or metal roofs with pitches up to 45°.
- Spinaway provides natural ventilation powered by the wind. No electrical connection or ducting is required.
- Maintenance free operation. Relax and enjoy the benefits of cooler evenings and more comfortable living.

Optional interior grilles

If ceiling grilles are installed your Spinaway system provides year-long ventilation of your home. The number of interior ceiling grilles and Spinaway units required depends on the size of your home. Your supplier or Ampelite can advise you, also see the general guide on the inside pages.

The following benefits are in addition to any rights conveyed by Government regulations and the Trade Practices Act.

Ampelite Australia Pty Ltd warrant Spinaway ventilators to be free from defects in material and workmanship resulting in the product failing to rotate for a period of 10 years. Should the bearings fail during the Warranty period, Ampelite will post two replacement bearings at no charge. Evidence of bearing failure should be forwarded freight pre-paid to the nearest Ampelite state office. Failure caused by incorrect installation, attempted repair, accident or acts of God are not covered by this warranty. Ampelite is not responsible for removal or re-installation costs, or consequential damage.

A simple to follow guide is printed on the Spinaway carton for both tiled and metal roofs. No special tools are needed, and no electrical connections or trade qualifications are required. Care should always be taken when working on a roof and safety provisions put in place to suit the situation. Make sure ladders are used according to the manufacturer's recommendations and safe practices. Ampelite Australia Pty Ltd are not responsible for any incident arising from installation.

Professional installation service

Low cost professional installation is available. Ask your supplier for details.

Choose your preferred colour

Standard: Mill finish (silver)

Colours:

Blue Ridge	Jasper	Plantation
Bushland	Loft	Sandbank
Classic Cream	Manor Red	Shale Grey
Cottage Green	Mocca Brown	Surfmist

Spinaway™

TURBO VENTILATOR

- **300 mm turbine**
- **Uses wind energy**
- **Non rusting**
- **Range of colours**

Made in Australia by

The Spinaway ventilator system is effective all year-round, removing super hot or moisture laden air from roof cavities and replacing it with fresh outside air. Greatly improves the interior comfort of your home. Energy free!

How it works and saves –

Spins away heat

Spinaway turbo ventilators exhaust the very hot air that becomes trapped in the space between the ceiling and roof covering. This prevents heat radiation into rooms and helps lower inside temperatures.

A well ventilated home is protected from problems associated with moisture condensation and temperatures that can soar to a blistering 60°C in summer. In hot humid localities, mould, mildew, dry rot, and damp insulation (which is inefficient when wet) is often encountered.

Normal insulation is not enough to prevent heat radiation into your home. With effective roof space ventilation less heat is radiated into rooms allowing airconditioners and fans to cope more easily and save on power too.

Spinaway turbo ventilators use the free energy of the wind 24 hours a day, every day of the year... more comfortable conditions year-round.

Year-round benefits

Spins away damp

Moisture laden air from inside the home, and outside air can condense and cause dampness. Ventilation prevents damage to ceilings and roof timbers, helps control mildew. Shaded areas of your home particularly benefit.

Ceiling insulation is less efficient when wet, and as a result more heating is needed to compensate. Ceilings can become mildewed too, good roof space ventilation overcomes these problems and reduces costs.

In rooms that are most prone to mildew and mould formation, ventilation helps to control the rapid growth that can occur. This occurs most when humidity is present. A Spinaway ventilator is an energy free supplement to an electrically powered extractor.

We recommend installation of two under eave vents to each Spinaway installed to ensure correct operation.

Spinaway

One Spinaway turbo ventilator effectively ventilates the roof space of an average size home. For larger homes a second or third ventilator is required.

- Light, strong and durable aluminium construction. Free flow 300 mm throat. Complete with base flashing and necessary assembly screws etc.
- Sealed twin bearings with stainless steel balls.
- Variable pitch base – 0° to 45°.
- A quality product. Non-rusting aluminium.
- Cyclone tested. Special fixings required.

How many ventilators for larger homes?

Many homes need just one but for greater satisfaction allow two for homes 160 -180 square metres, and three for 220 - 270 square metres.

Other ventilation products made by Ampelite

In addition to Spinaway models Ampelite have two further domestic energy free ventilators – the "Ampelite" and "Superflow". Both of these models are available in mill finish plus a range of colours to suit any roof. The Superflow has a three blade fan incorporated which helps the overall efficiency.

Your supplier can give you details of these products.

Ampelite also have a range of heavy duty industrial ventilators with throat diameters up to 950 mm.
